It's time for ceramics, it's time for ceramics again. Finally, it seems that, after many years, it is growing again. In this universe made of colour games, original laying solutions, high-quality materials, new surfaces, the role played by architects and designers becomes fundamental. **They are the authoritative interpreters of the new living trends.** Future presents here, in advance, a wide range of wall and floor tiles, contemporary surfaces that recall woods, marbles and stones wisely accompanied by decorative elements that embellish kitchen and bathroom walls. **And then many colours, imaginations, mosaics to create solutions and perspective games with a great visual impact. Future starts here. Future has already started with FUTURE, ceramics that anticipates future.**

THE FUTURE

STARTS **HERE**

Future, a name a guarantee!
True, because Future Ceramics is the company that anticipates the future.

Situated in the Second Industrial City of Dammam, Saudi Arabia, Future's factory has been built over a 277,500 SQ meter area and will have a capacity of 150,000 SQ meter/Day of ceramic and porcelain tiles by 2014.

Aiming for excellence, the company avails itself of exclusively Italian technologies and orients its policy towards high standards of technical and aesthetic quality, service and production innovation, to offer latest-generation products in terms of quality and design, on par with the top levels of the market.

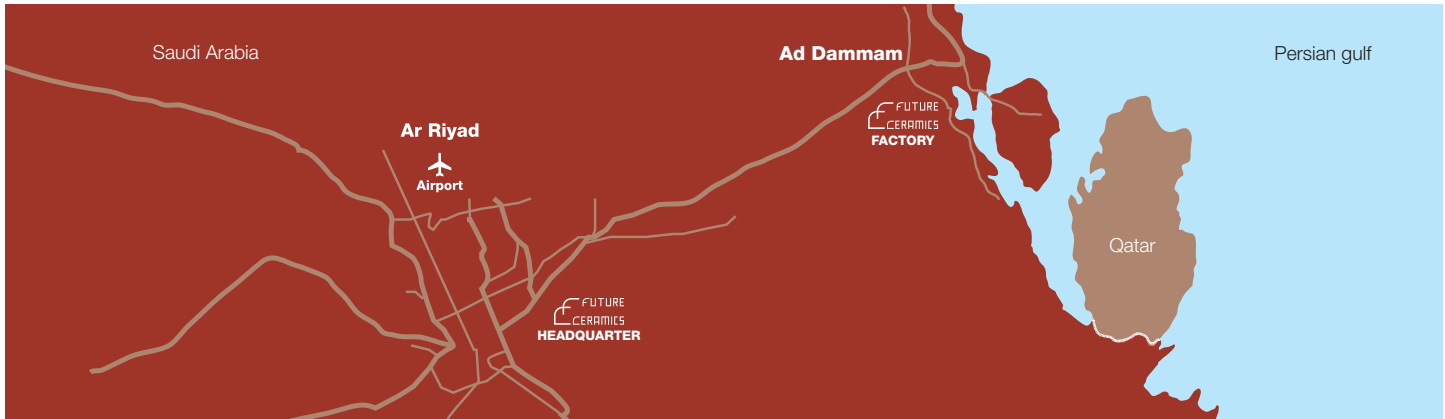

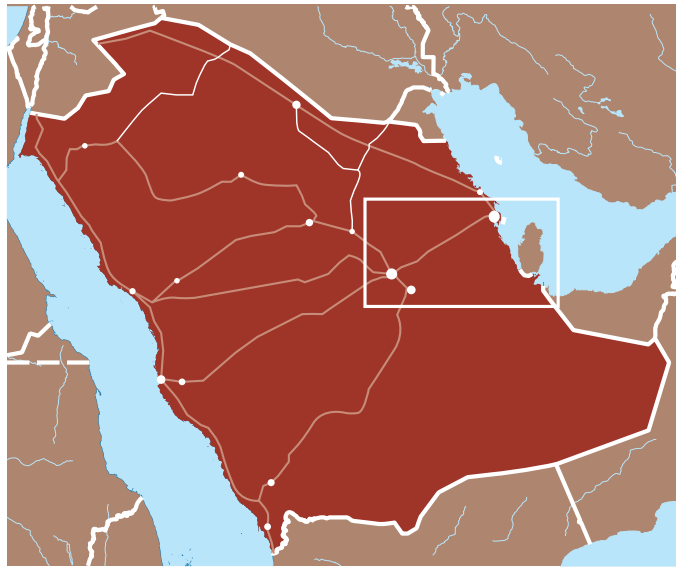

In this moment of great development in the building market, Future Ceramics wants to introduce itself to architects, designers, planners and building companies as a dynamic, reliable partner in the realization of new living projects.

In order to offer a good service to the different interlocutors, the company is building some Future's mono-brand shops in various Saudi Arabian cities, modern show-rooms where courtesy and staff professional competence are at customers service. It is a new way to sell ceramics, to suggest and advise, to assist Customers in their choice and to follow them in the next phases.
It is a new sale style.

It is FUTURE style.

TRENDY COLOURS

ART a young and sparkling collection, where colour becomes imagination and vitality. It makes use of pastel shades instead of white to give “rest walls” an independent dignity.

ENERGY a wide range of plain colours, 15 sharp colours, strong but not shameless, wisely balanced and with a satin aspect.

A top-down view of a grid of white, circular paint containers. Each container holds a different color of paint, including shades of blue, green, yellow, orange, red, purple, and pink. The containers are arranged in a regular pattern against a dark background.

EXTRAORDINARY + COLOURS

COLOUR IS A MUST, IT'S TIME TO DARE.

It didn't stop at accessories and furniture fittings that transform home in a multi-colour stage. Chromatic emotion also extends to floors, ceilings and walls that rediscovered it little by little, thus giving home a new life.

FUTURE plays with colour in many of its collections, thinking about a new look mainly for bathroom, a space that must be revised because it had to be destined to wellbeing, to self care. So, we can find the warm tones of red, with its orange and pink versions, the cold tones of blue and light blue, crowned by yellow-green energetic tones.

cm 20x20 & cm 33x50 - 8"x8" & 13"x20"

PRE-CUTTINGS

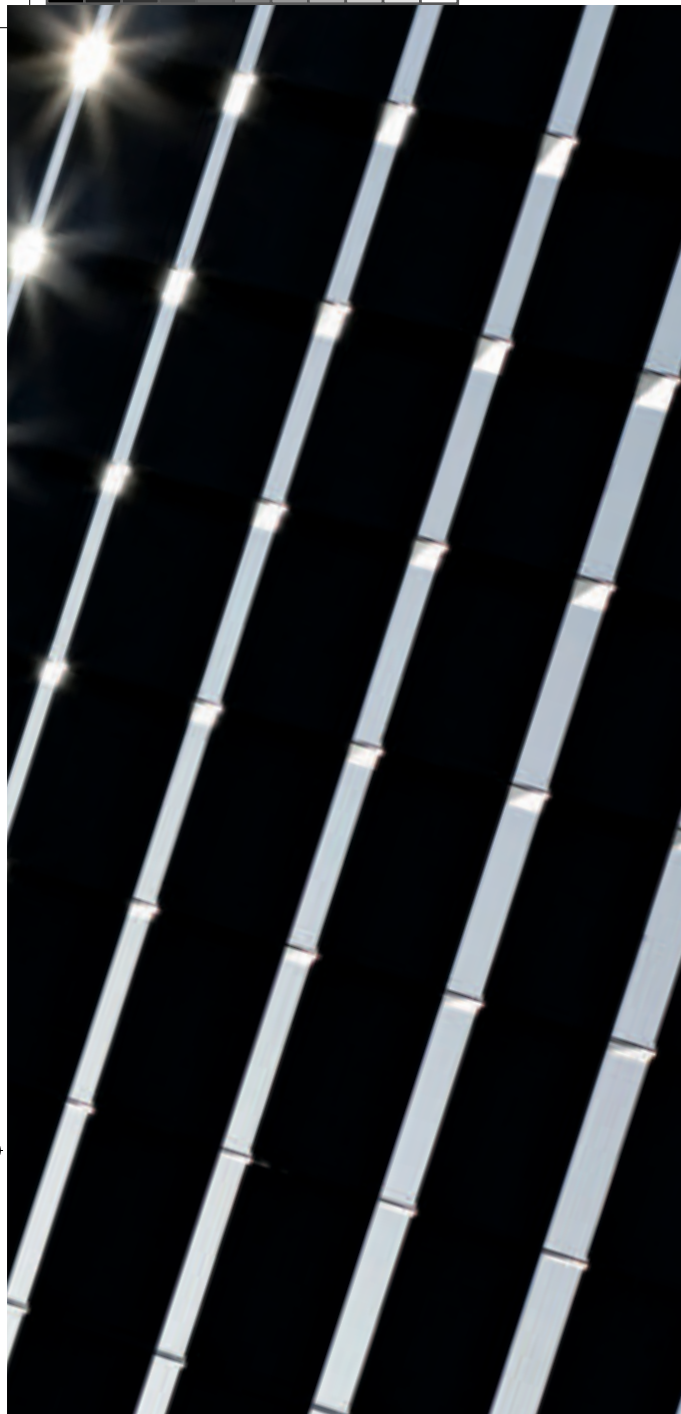

PRECISE CUTTING, MOSAIC EFFECT

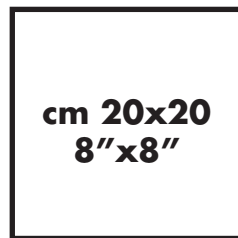

AVAILABLE PRE-CUTTINGS

FUTURE makes use of this technology to realize pre-cuttings on uncooked tiles, that is to say before grazing. The final effect is that of a mosaic but, unlike the real one, it has many advantages, mainly in laying that becomes more precise and quick.

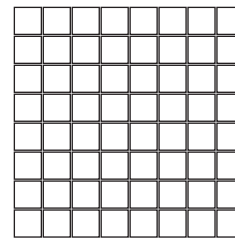

FUTURE presents 4 different types of pre-incisions, that can be done on size 20x20 and 33x50. Many ideas to give life to the walls, to create games of small and big squares, maybe colouring joints with new shining fillers.

MOUNTED ON NET

MOSAIC LIFE

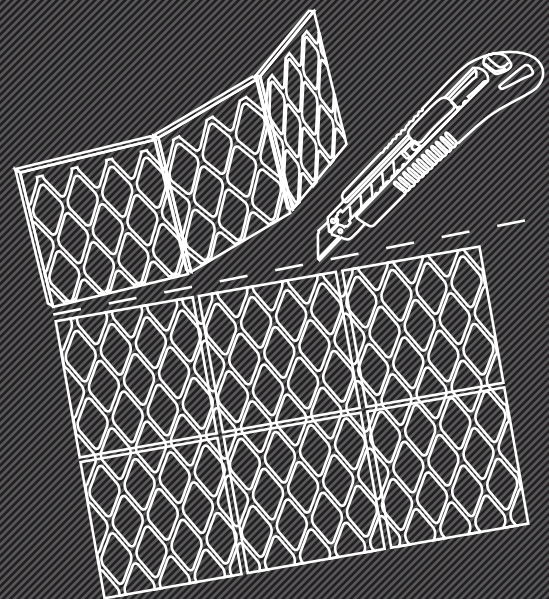

CERAMIC TILE BECOMES SOFT

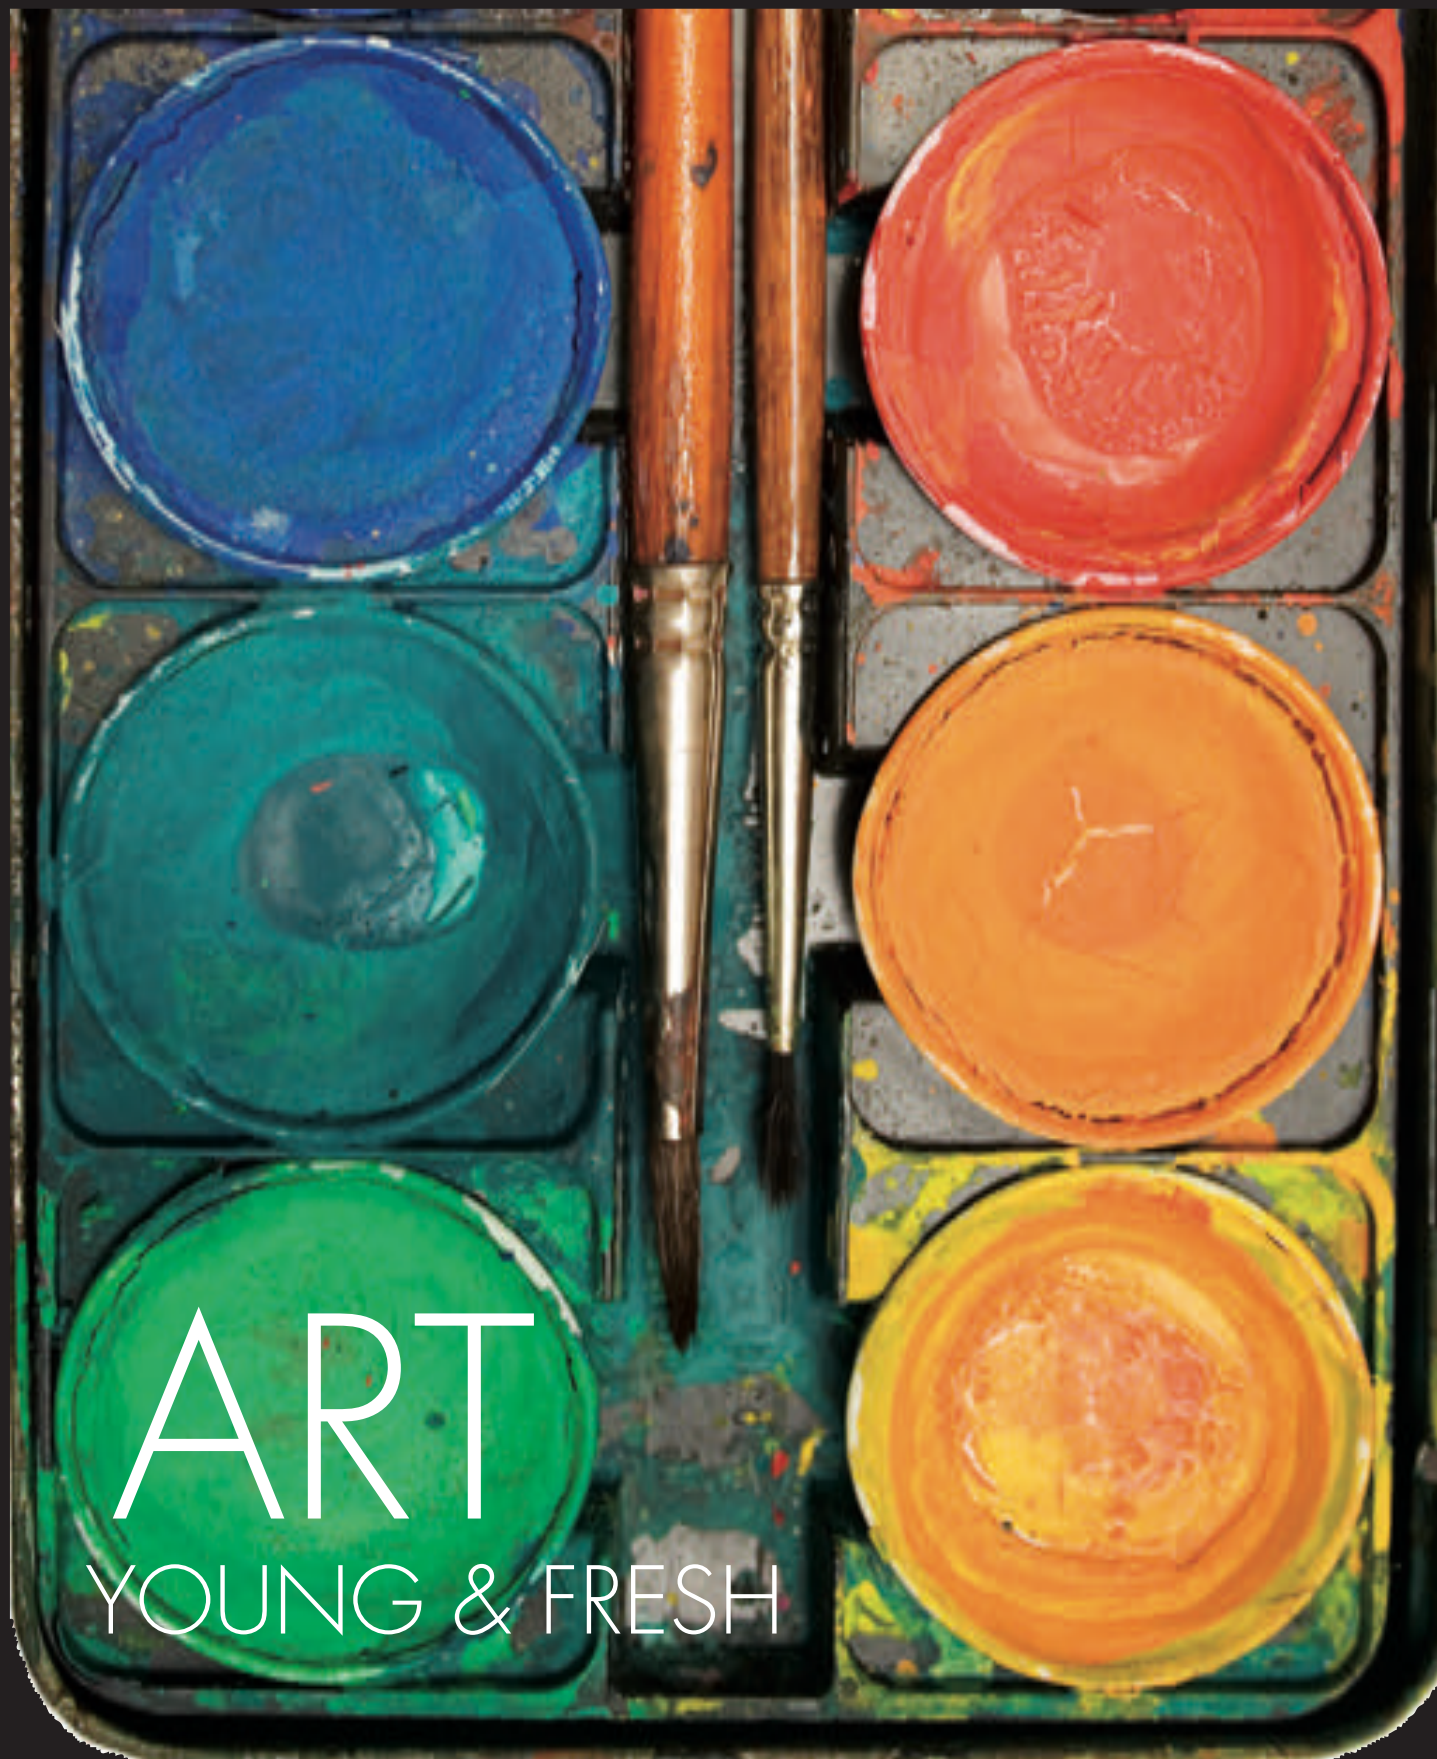

MOUNTED ON NET

It can be folded, it can match the soft wall curves or the strong column ones. It can be fit inside floors as a precious inlay or as a carpet.

FUTURE mesh-mounted mosaics for LOFT collection wisely mix different nuances, in 2 or 3 colour versions, creating geometric patterns that planners are free to combine in designs and compositions with a high architectonic and decorative value.

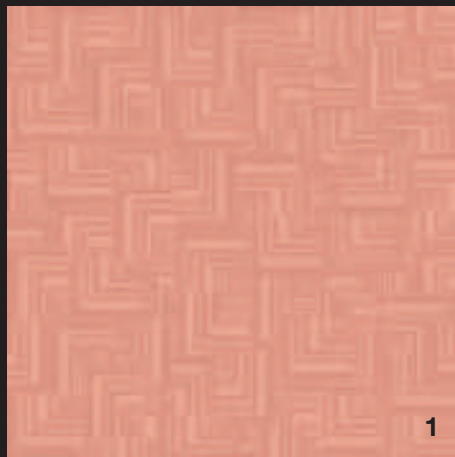

ART WALL 20x43 8"x17" :: FLOOR 33x33 13"x13"

Colours gaiety and euphoria are the protagonists of this collection. Surfaces are tinted with vivacity due to the fresh and young character of its decors.

WOOD FLOOR 43x43 17"x17"

WOOD

BETWEEN ART AND NATURE

Nature, art and technology come together to create a collection inspired by wood, suitable for all types of floors, both in private and public spaces.

PERFECT LAYING & CLEANING

LAYING INSTRUCTIONS

The final result of the application of the products also depends on the professionalism and accuracy with which the materials are fitted.

Following, some points concerning the application of ceramic wall and floor tiles.

BEFORE INSTALLATION

It is important to check that you have sufficient materials to complete the job and to inspect the product for any defects already visible before laying.

Prior to laying ceramic tiles, make sure that the surface to be covered is perfectly level, dry and smooth.

Carefully remove any dust or residues with a suction pump.

LAYING

After choosing the most appropriate adhesive and preparing it properly following the manufacturer's instructions, spread the adhesive on the ground by using a straight-edged spatula and then comb it with the thooted side.

For larger than 30x30 cm formats, floors subject to heavy pedestrian traffic and external uses, double application of the adhesive is advisable. His practice prevents the creation of voids that could lead to breakage.

Joints allow the floor-(wall)-system to settle and adapt to technical-structural variations in the building.

CLEANING AND MAINTENANCE

The quality of a ceramic tiles covering depends not only on good design and correct laying, but also on the care that will be addressed to the surfaces.

In order to highlights the aesthetic features of the materials we recommend you to observe some basic precautions as regards maintenance, cleaning and protection.

THE FIRST CLEAN

The most important cleaning operation has to be performed immediately after the tile has been set and before the floor is used. This is a fundamental stage in order to ensure simple and easy cleaning and ordinary maintenance.

It is advisable to apply an acid-base detergent to small surfaces at the concentration recommended by the manufacturer. Then let it work for a few minutes before removing it with a rough cloth. It is necessary and essential to rinse the surface with plenty of clean water.

Before proceeding with this type of activity, it is advisable to carry out a resistance test on a small surface area of the material to not damaging the entire surface.

The choice of the type of joint space depends of several elements, that are:

- a) the place where the tiles are to be fitted - indoors or outdoors;
- b) tile size;
- c) desired width – floor tile joint spaces are normally wider than wall joint spaces;
- d) joint colour – this can be the same colour as the tiles or can be different to have a contrasting effect;
- e) type of joint finishing – smooth, rustic, flat or concave.

In order to ensure that the joints are well aligned, the tiles should be fitted with the help of cross guides and/or wedges.

GROUTING THE JOINTS

After about 24-48 hours it is possible to proceed with grouting. Clean the laid floor carefully and then apply the grout to the whole surface using a rubber-coated spatula. Tile installation without joints is cheaper and faster, but has the disadvantage of making floors more rigid and unable to withstand mechanical shocks.

AFTER INSTALLATION

Residues of mortar, cement, grout or adhesives, often not visible to the naked eye, are always left on the floor. These materials make the floor less attractive and may trap dust and dirt. About 36-48 hours after grouting is finished, the cleaning must be carried out using a descaler detergent diluted in water in accordance with the producer's instructions.

To prevent the acid-based product from corroding the cement-based joint filler, wet the floor prior to cleaning so that the joints are impregnated and thus protected from the corrosive action of the acid.

ORDINARY CLEANING

Ordinary cleaning eliminates dirt, marks or footprints and reinforces the protective layer in case of wear.

Surfaces should be cleaned with proper detergents that do not affect surfaces and glazes, it is therefore best to avoid using acid based or aggressive cleaners.

EXTRAORDINARY CLEANING

When the original treatment has been heavily damaged or is very old, or if treatment care procedures have not been carried out correctly, it is necessary to perform an exceptional care procedure.

In these cases, old treatments or old layer of care wax have to be removed and then restored. Before using the appropriate product for this operation, it is advisable to perform a test on a small part of the surface.
